

a global vision for software testing

On-Demand Testing

TCL have teamed up with [uTest](#) to bring On-Demand testing to the UK.

“Clients use On-Demand for several reasons

- To supplement existing testing and QA activities
- They are delivering a product to market and they do not have a QA or Testing function

On-Demand is typically used for easy to access applications; Web, Gaming, Mobile or desktop applications. Although it can be used for more complex client server applications by utilising secure proxy access to client environments. ”

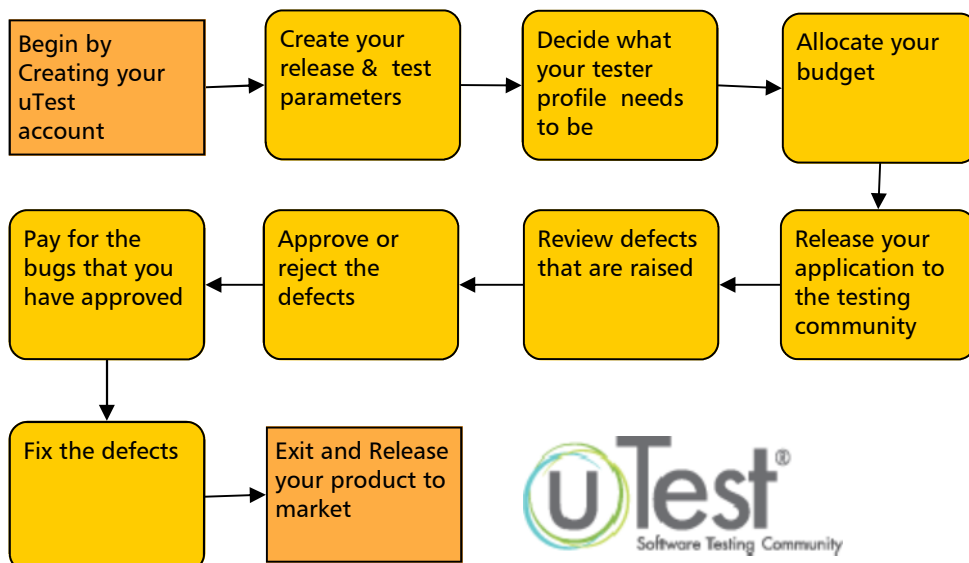

Tony Prosser, Director - TCL Group Ltd

On-Demand testing gives you access to a worldwide community of software testers (15,000 plus) that gives massive coverage for both environments (OS, web browser, firewall, mobile handset, mobile network carrier, etc.) and demographics (age, gender, language, geographic location, etc.). The community accesses the application under test via a secure web platform by invitation based upon their experience, capability and profile.

With On-Demand testing there is no longer any excuse to deliver poor quality applications to your market, no matter what the size or organisation of your company.

How does uTest work?

Key benefits:

Unlike hiring additional in-house QA personnel or signing long-term outsourcing contracts, On-Demand enables:

- Real-world testing coverage. Build a virtual QA team by application type, geographic location, language, OS/browser, etc
- Real-time responsiveness. Run a complete test cycle in 48 hours or less
- Cost savings. A years subscription is typically less than 30% of the cost of one additional QA person
- Easy to try. Simple subscription or per-project pricing, no volume minimums or long-term commitments
- Unrivalled mobile coverage on handsets, carriers & geographic distribution
- Real world load testing by real live testers
- Cost control - pay-per-bug; the on-demand marketplace is the most cost efficient way to deliver QA services.

What does it cost?

You pay for the bugs that have been approved under the following classifications:

- User Interface (UI) - £20
- Functional - £32
- Technical - £45

Our pricing model begins at £1,000 per month, it's a month-to-month subscription, with a 30 day cancellation notice. Furthermore, you can freeze your account for up to 90 days in the event you have no testing needs and you will not be charged for these months. Once your testing starts, "approved" bugs are applied against your budget.

Remaining monthly budget, can be carried-forward to subsequent releases.
