

# ISEB Intermediate Certificate in Software Testing

## Objectives of the course

The overall objectives of the course for the Intermediate Certificate are to provide a sound basis for candidates intending to register for either the Test Management Practitioner Examination or the Test Analysis Practitioner Examination. The Intermediate Certificate is a pre-requisite for entry to either of these examinations. The examination is classroom-based and is taken at the course location.

After taking the course you will:

- be able to recall the main principles and themes from the Foundation syllabus
- describe and analyse Application Domains and Life Cycles and their risks and challenges
- analyse scenarios to identify specific technical challenges, such as test environments and test design techniques
- analyse scenarios to identify specific management challenges, such as risk, estimation and entry and exit criteria
- understand where to apply technical and management techniques appropriately
- be familiar with examination questions and how to address them

## Pre-requisites for the course

- Candidates must already hold the ISEB/ISTQB Foundation Certificate in Software Testing
- Ideally have at least 18 months experience in software testing, although this is not mandatory.

## Course contents:

The course covers five main topics: fundamentals of testing, reviews, risk, test management and test analysis.

The course is intensive and includes end of section tests and a mock examination.

## Course duration

The course is held over 3 days (9 am to 5 pm approx.), with the 1-hour examination in the morning of the following day.

## Course style

The course is delivered in a classroom environment.

## Pre and post course work

There is no pre course or post course work required.
