# uTest v3.0

## The New and Improved uTest Platform

Far more than a simple refresh, uTest v3.0 is a comprehensive rewrite of our testing platform – from the UI design, back through the code and underlying architecture – all based upon our learnings from more than 1,000 test cycles over the past 18 months. The result is a faster, more intuitive, more powerful experience for our growing base of customers.

### What's New?

Of all the changes implemented in this new version, two stand out from a customer perspective. First, we've built a new **test cycle wizard**. Creating a clear test cycle is the most important thing a customer can do to ensure success, but there are a lot of details required to make a test cycle perfect. Our new wizard makes this process easy, ensuring that each part of the test cycle is included.

The other big new feature is our **enhanced tester rating system**. Our platform will evaluate the performance of each tester, and once it has accumulated enough information about a tester's performance, it will assign them a rating. Testers who are in the top 20% of all rated testers will receive a gold, silver, or bronze rating.

Other features include:

- **Resizable Columns:** All columns are now resizable and rearrange-able using drag and drop
- **Tester Messenger:** Enhanced communication tools help you communicate with testers
- **Advanced Coverage Reports:** Know the status of each test cycle with a single informative report
- **Easier Filtering:** All test cycles and bugs can be easily filtered to find the exact information you need
- **Smart CSV Exporting:** Export a CSV file vital data about your test cycle
- **Multiple Users:** Add multiple members of your testing organization with our new account manager
